                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             33 laGlyAsn.ArgArgGlyGlnAlaArgArgLeuAlaProAsnPheArgTr 49. ```
The present invention relates to a purified polypeptide capable of binding memorrophin receptor (p7-4RR). The invention is useful for binding and modulating the activity of p75kRs. The peptide mediates MFF-indened apopticals, which plays an important role in meurogenetic diseases. The peptide of the invention and p75kRs are useful for inhibiting NF-kappes activation in a cell or a subject, for inducing caspase-2 and caspase-3 activity to cleave poly (ADF-ribose) polymerase and fragment nuclear DNA in a cell by co-expression of (1) and p75-WRR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New p7s-neurotrophin receptor-associated cell death executor (NADS) at the gene encoding NADS, useful for modulating the activity of p75NTR and for detecting neurodegenerative diseases .

New p75-neurotrophin receptor-associated cell death executor (NADE) and
the gene encoding NADE, useful for modulating the activity of p75NTR
and for detecting neurodegenerative diseases
                                                                                                                                                                                           The present invention relates to a purified polypeptide capable of binding neucotrophin receptor (p75-WRN). The invention is useful for binding and modulating the activity of p75WRN. The peptide mediates MGF-Induced apopticals, which plays an important role in meurogenetic diseases. The peptide of the invention and p75WRN are useful for inhibiting NF-kappas activation in a cell or a subject, for inducing caspase-2 and caspase-3 activity to cleave poly (ADP-ribose) polymerase and fragment nuclear DNN in a cell by co-expression of (1) and p75-WRN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             34 lyasn.....ArgArg 37

```
The present sequence is one of a large number of 5' ESTS derived from menhas encoding secreted proteins. An ORP has been identified within the sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oilgo-dr prinade CDNA ilbraries. Such ESTS are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. So for the formal submitted on the second on the sequence of the sequence in the cDNAs and cDNAs are set of the full sequences and the full sequence in the second of the sequences of the sequence of the s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        51 IleProAsnArgGlnIleAsnAspGlyMetGlyGlyAspGlyAspAe 67

comprises: (a) an oligo-dry primer and an oligonuclectide complementary controllectide sequences defined in the specification. Where a primer and an oligonuclectide complementary strand of a polynuclectide which comprises one of the SGD nuclectide sequences defined in the specification, where the oligonuclectide comprises at least 15 nucleotides; or (b) a combination of an oligonuclectide comprises at least 15 nucleotides; or (b) a combination of sequence and an oligonuclectide comprises a $i$-end a polynuclectide comprises a $i$-end a sequence and an oligonuclectide comprises a $i$-end comprises at least 15 nucleotides and the combination of the $j$-end sequence; or oligonuclectide comprises a $i$-end sequence and an oligonuclectide comprises at least 15 nucleotides and the combination of the $j$-end sequence; or oligonuclectide which comprises at least 15 nucleotides and the combination of the specification. The primers are useful for spitesisting bolynucleotides, particularly full-length CDMAs. The primers are useful for spites stating polynucleotides, particularly full-length CDMAs. The primers are also useful for the comprise as a seally without any specialised methods. Admittaged to Admittage and Admittages and

The present invention describes primer sets for synthesising 5602

(All-length Conbus defined in the specification, Where a primer set

(All-length Conbus defined in the specification, Where a primer set

(Comprises: (a) an oilgoud primer and an oilgonucleotide complementary

(COMPLISES: (a) an oilgoud primer and an oilgonucleotide complementary strand of a polynucleotide which comprises one of

(COMPLISES: (b) an oilgonucleotide comprising a sequence complementary to the

(COMPLISES: (b) an oilgonucleotide comprising a sequence complementary to a

(SOM) sequence and an oilgonucleotide which comprises a 5'-end

(SOM) sequence and an oilgonucleotide sequence, where the

(COMPLISES: (c) and sequence as a 1'-end sequence where the

(COMPLISES: (c) and sequence as a 1'-end sequence where the

(c) ingonucleotide which comprises a 1'-end sequence (c) primers as a 1'-end sequence (c) primer sets can be used in antisense therapy and

(C) the 5'-end sequence as elected from those defined in

(C) the formation of the primers are also useful for the

(C) dene therapy. The primers are useful for synthesising polyuncleotides,

(C) the full-length cDNAs. The primers are also useful for the

(C) defined assaily without any specialised methods. AMR03646 to

(C) AMR03893 represent human amino acid sequences; AM803466 to

(AM803893 represent human amino acid sequences; and AM13632

(C) fethe present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              18 yGluGluaspargProLeuGlyGlyGluGlyHisGlnProAlaGlyA 35

The present sequence is the coding sequence for a human brain-expressed X-linked protein (DBRA). Hex and its coding sequence are useful in the diagnosis and treatment of dysembryoplasis, hereditary diseases, cancer, tunours, deafness, X-chromosome-binding mental retradition and lissencephalous disease. Hex is also useful for screening minute, adonts, or inhibitors, and in peptide fingerprinting identification. Hex coding sequence can be used as primers or probes, or in producing gene chips or microarrays.
                                                                                    Isolated human brain-expressed Y-linked polypeptide used to diagnose and treet of dysembryphasts, hereditary diseases, cancer, tumor, deariness and X-chromosome-binding mental retardation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; X chromosome linked gene expression protein 14; cancer;

Mao Y, Xie Y;
  AAA87080 to AAA87656 represent nucleic acid sequences (NI) encoding a acariongenesis biomarkers, the carcinogenesis biomarkers are induced by treating rat hepatocytes with phenobarbitol. The nucleic acids are useful for identifying carcinogenic compounds. The nucleic acid molecules can be used to derive probes and/or primers for detecting or inducing carcinogenesis, respectively.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; brain expressed X-linked procein; cytostatic; auditory; nootropic; hisex; dysembryoplasia; hereditary disease; cancer; tumour; deafines) X-chiromsome-binding mental retardation; lissencephalous disease; ss.

```
Sequences AAF5950-AAF59643 represent CDNAs encoding 54 human

cell cycle and proliferation proteins (CCFPR, AAB60645-AAB60506.

CCTPR and agonists of CCPPR are used to treat diseases or conditions.

CCTPR and agonists to CCTPR are used to treat diseases or conditions.

CCTPR and agonists to creat diseases or conditions associated with antegorists are used to enranelinked immunosorben associated with a core expression of functional CCPPR. Monoclonal or polyclonal antibodies to corp may be used in enranelinked immunosorben associated with a conditional color and the core and provided in a conditional antibodies.

CC radioimmunosasys to detect CCPPR. CCPPR itself may be used to detect compounds etg., antibodies, oligomiclectides and proteins (receptors) (cc that specifically bind to CCYPR. and in drug screening methods to inclectides can be used to generate transgenic animal models of human disease, and can be used to generate transgenic animal models of human concentralities with respect to the expression of CCYPR. CCYPR canomical in the confidence and prevented with CCYPR. Diseases which can be disponder associated with CCYPR. Diseases which can be disponder associated with CCYPR. Corper and colorents and cell and cell signalling disorders and cell proliferative developmental and cell signalling disorders and cell proliferative concerting and collections and collections and collections and collections and collections and cell signal and cell advancer. Specific examples of these disorders and infections caused by bacteria.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      299 AATGTCAACCAGGAAAATGATGAAAAGAAGAAAAGGAGGAAGTTGCTAA 348

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a purified polypeptide capable of binding neurorophin receptor (p75-MR). The invention is useful for binding and modulating the activity of p75NR. The invention is useful for MGF-indeuced soppicals, which plays an important role in neurogenetic diseases. The peptide of the invention and p75MR are useful for inhibiting NF-kappab activation in a cell or a subject, for inducting espace 2 and espaces a certivity to cleave poly (ADP-inbose) polymerase and fragment nuclear DNA in a cell by co-expression of (1) and p75-MR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New p75-neurotrophin receptor-associated cell death executor (NADE) and
the gene encoding NADE, useful for meditating the activity of p75NTR
and for detecting neurodegenerative diseases

Sequences AAF21614 - AAF2031 represent DNA sequences encoding human propreted with breast and overlan depresent sequences are associated with breast and overlan cancer. Included in the invention are sequences AAF22032. AAF22040 and AAF59129 withof are used in the invention and characterisation of the DNA and protein sequences of the invention. The breast and overlan cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; antidacterial antiinflammatory antiulicer; vulnerary; anticonvulsant antibacterial antiinflammatory, antiulicer; vulnerary; anticonvulsant antibacterial, antiinflammatory, antiulicer; vulnerary; anticonvulsant antibacterial, and protein sequences are used in the disposals of cancer, particularly breast and ovarian cancer. The nucleic acid sequences, proteinties and increasts and equiness are used in the disposals, percention and treatment of immune disorders e.g. Addison's disease, callergies, autoinmune hemolytic aneant, autoinmune thyotoditis, callerses amblitus, croh's disease, multiple scherosis, rheumatoid athaltis and increative collisis; candiovascular disorders such as myocardial isochemnas; wound healing; neurological diseases such as cerebral anoxia and epilepsy; and infectious diseases such as
                                                                                          New human breast and ovarian cancer associated gene sequences and the polypeptides encoded by these genes, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and neurological diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 917 BP; 228 A; 203 C; 270 G; 211 T; 5 other;

The present sequence is one of a large number of 5' EST9 derived from manks encoding secreted proteins. An ORP has been identified within the sequence. The 5' EST9 were prepared from total human RNAs or polyA+ RNAs dequence. The 5' EST9 were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences subsuly correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo off primed onby libraries. Such EST9 are not mRNAs and even in those cases where longer conk sequences have been obtained, the full 5' TRY is rarely included.'S EST9 are derived from obtained, the full 5' TRY is rarely included.'S EST9 are derived from burshs with intext? sends and can therefore be used to obtain full length encounted the second off the constant of the cons
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                219 ATGGCAAATATTCACCAGGAAAACGAAGAGATGGAGCAGCCTATGCAGAA 268

The present invention describes primer sets for synthesising 5602 (cfull-inenth combas defined in the specification. Where a primer set (full-inenth combas defined in the specification. Where a primer set (cfull-inenth compasse) and oliqoped-of primer and an oliqonuclectide complementary of the complementary strand of a polynuclectide which comprises one of the 5602 nuclectide compless at least 15 nuclectides. On the complementary strand of a polynuclectide which compless as 3-end sequence complementary to the complementary strand of a polynuclectide which compless a 3-end sequence complementary to the complementary strand of a polynuclectide which comprises a 5-end sequence. Where the complementary of the specification. The primer sets can be used in antisease threapy and the 5-end sequence(3)* end sequence is selected from those defined in the specification. The primers acts useful for synthesising polynuclectides comprises the primers are also useful for synthesising polynuclectides comprises the primers are also useful for synthesising polynuclectides complementary full-length cDNAs. The primers also useful for synthesising polynuclectides complement and performantly of the full-length cDNAs. The primers also useful for AM13531 to AM13671 to

The arctinogenesis biomarkers are induced by treating rat hepatocytes with phenobarbitol. The nucleic acids are acids are acid for identifying carcinogenic compounds. The nucleic acid molecules can be used to derive probes and/or primers for detecting or inducing carcinogenesis, respectively.
                                                                                                                                                                                   Rat; phenobarbitol; carcinogenesis marker; carcinogenesis; detection; identification; carcinogenic; probe; primer; ds.

Human, brain expressed X-linked protein; cytostatic; auditory; nootropic; Hems; dysemiryoplasis; heedlitary disease; cancer; tumour; deafiness; X-chromosome-binding mental retardation; lissencephalous disease; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is the coding sequence for a human brain-expressed X-linked protein (BRSA). Has and its coding sequence are useful in the diagnosis and treatment of dysembryoplasis, hereditary diseases, cancer, tumours, deafness, X-chromosome-binding mental retradition and ilssencephalous disease. Has the useful for screening mimics, agonists, or inhibitors, and in peptide fingerprinting identification. Has coding sequence can be used as primers or probes, or in producing gene chips or microarrays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Isolated human brain-expressed X-linked polypeptide used to diagnose and treet of dysembrophasia, hereditary diseases, cancer, tumor, deafless and X-chromosome-binding mental retardation
Human brain expressed X-linked protein, hBex, coding sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        :||i|||

ID NO:76.

Human cell cycle and proliferation protein CCYPR-22 cDNA, SEQ

24-APR-2001 (first entry)

AAF59611;

cell cycle and proliferation protein; CCYPR; human; agonist; antagonist; gene therapy; detection; gene therapy; transgenic animal disease model; immune disorder; reassgenic animal disease model; immune disorder; cell elevelopmental disorder; cell signaling disorder; elevenour; anamala; epilepsy; arterioscierosis; sathma; allergy; diabetes mellitus; menstrual cycle disorder; bacterial infection; ss.

```
The invention relates to human nucleic acids (AAIS7789-AAI61369) and the encoded polypeptides (AAAI86213) with noctropic. Immunosuppressant and cytostatic acitylity. The polynucleotides are useful in one therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, ench as the peripheral nervous statistics and shy-brager Syndrome. Other uses include the lateral sclerosis, and shy-brager Syndrome. Other uses include the activity of the activity of selementatic activity, haemostatic and thromboty creativity, cancer disgnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leavemiss and this orders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Note: The sequence data for this patent did not form part of the printed specification.
                                                                     Novel nucleic acids and polypeptides, useful for treating disorders such as central nervous system injuries -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                371 CTAGAGGAAAC.....CGT 384
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            385 AGGCGGTTCCGCGTTAGGCAGCCCATCCTGCAGTAAAAAGATGGGACATAAT 434

Sequences AAF5950-AAF59643 represent cDNAs encoding 54 human cell cycle and proliferation proteins (CCPPA, AAB60543-AAB6056.
CCTPR and agonists of CCPPR are used to treat diseases or conditions associated with decreased expression of functional CCPPR, while CCPPR antagonists are used to treat diseases or conditions associated with overexpression of functional CCPPR. Monoclonal or polyclonal antibodies to CCPPR may be used in enzyme-linked immunosochent assays (ELISA) or radoimmunosasys to detect CCPPR CCPPR in an expection of functional CCPPR, and in drug screening method to compounds ery antibodies of that specifically bindodes oldered the activity of CCPPR CCPPR compounds that modulate the activity of CCPPR CCPPR CCPPR compounds that modulate the activity of CCPPR CCPPR CCPPR content of the compounds that modulate the activity of CCPPR CCPPR CCPPR content of the compounds the condition of the activity of CCPPR CCPPR CCPPR content of the compounds the condition of the activity of CCPPR CCPPR CCPPR CCPPR content of the compounds the condition of the compounds to the compound of the compounds to the compound of the compounds the condition of the compounds to the compound of the compounds to the compound of the compounds to the compound of the compound of the compound the compound the compound of the compound of the compound of the compound the the compound of t

obtained, the full 5' UTR is rarely included. 5' ESTs are derived from whise with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs 3' ESTs are also used in dispinctio, forensic, gene thereby and chromosome mapping procedures. They are used to obtain vectors.

The sequence does not necessarily represent the entire amplicon. Sequence derived from PolyPhred was trimmed from each end of each unique contig until five consecutive bases exceeded a quality score threshold of 20, and the next 10 bases averaged a quality score of 20 or greater Amplicon size was estimated by agarose gel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 opnotes 1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), and digested with Not I and clond into the Not and Eco RI sites of the modified pf/73 vector. Library ewert through one round of normalization, and was exert through by Bento Soares and M. Fatima Bonaldo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        seq_documentation_block: 628 bp mRNA EST 24-FEB-2000 LOCOS ANG 6168 NO CORP. 24-FEB-2000 ANG 6168 NO CORP. 24-FEB-2000 ANG 6168 NO CORP. 24-FEB-2000 SERVING ANG 6168 NO CORP. 25-2097027 SY SERSION OF ANG 64 MRNA sequence. ```

```
The STS is derived from PCR amplicons generated from genomic DNA, sequenced from each end using the amplification primers. The sequence des not necessarily represent the entire amplicon. Sequence derived from POLYPHEG was trimmed from each end of each unique contig until five consecutive bases exceeded a quality score threshold of 20, and the next 10 bases averaged a quality score electrophoses is.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2 others

where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em., EMBL: SV., SMISSPROT; IT., TREMEL; WP:, WORMPEP; Information on the WORMPEP annotation on the WORMPEP annotation on the WORMPEP and Library described in U-J. Kim et al. (1996) Genomics 34, 213-218

This sequence is the entire insert of clone CTA-71487.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ### Conservation of the consensus of the consensus of the consensus of the conservation of the consensus of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      5496, .6885

On Apr 8, 1998 this sequence version replaced 91:2578134.
This sequence has been finished according to sequence may acquence has been finished according to sequence as follows. An attempt is made to resolve all sequencing problems,
such as compressions and repeats, but not necessarily within known
annotated human repeat sequence elements (e.g. Alu). Where the
sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence was generated from part of bacterial clone contigs of Muman chromosome 22 constructed by the Sanger Centre Chromosome 22 Mapping Group. 0y 380 gatgalgacgggttgggtggagttggagtgatetggaatttcatggaggagtgg 439	RESULT 14 H6535G19 H5635G19 H5635G19 H5635G19 H5635G19 H5635G19 H5635G19 DEPINITION Human DNA sequence from clone 635G19 on chromosome 7422.1.22.3 Contains a LAMR1 (Laminin Receptor 1 (67kp) (408 Ribosoma) Fortein 5A, P40)) pseudogene and part of a novel protein. Contains ESTS and GSSs, complete sequence. VRRSION AL035494 VRRSION AL035494 VRRSION AL035494 VRRSION FIG. 406 Ribosomal Protein P40, 408 Ribosomal Protein SA; CpG SURCE human.	N NONZ F	rogether with a note of the overlapping clone mane. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. The following abbreviations are used to associate primary accession numbers agiven in the feature table with their source databases: Em.; EMBL; Sw.; SWISSEROY; Tr.; TREMBL This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure' facture & Key. This sequence is ambiguous, there is an annotation using the 'unsure' facture & Key.	Muman chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group. Further information can be found at http://www.sanger.ac.uk/EGP/ChrX

polylinker; lst strand cDNA was prepared from mammary
gland tissue from a lactating female_and was then primed
with a Not I - oligo(dT) primer. Double-stranded cDNA was
ligated to Ecc Rt adaptors (Pharmacla) digsted to the
modified pT/73 vector Library is normalized. Library
was constructed by selector clabrary is normalized.
1 prince of the Not I and Ecc Rt aleas of the
mass constructed by selector clabrary is normalized.
1 chers a constructed by selector clabrary is normalized.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ογ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The STS is derived from PCR amplicons generated from genomic DNA, sequence drom each end using the amplification primers. The sequence does not necessarily represent the entire amplicon. Sequence derived from PolyPhred was triamed from each end of each unique contig until five consecutive bases exceeded a quality score threshold of 20, and the next 10 bases averaged a quality score of cor greater. Amplicon size was estimated by agarcse gel electrophoresis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cctaatatgcctttactgatccgtttgctgtgaacctatgttatttccatgtgtcaagt 770

                                                                                                                               misc_feature
Mapping Group. Further information can be found at http://www.sanger.ca.uk/MGPChir2 During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variationas regenter with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. We we submit sequences with the following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
